

Data Quality Issues: Hubstaff x ClickUp Matching

Why time does not fully map to ClickUp tasks | Finovate Insight
Prepared for management review

Hubstaff (time) and ClickUp (tasks/structure) are linked by task ID (*hubstaff_tasks.remote_id = clickup_tasks.task_id*). The link itself is reliable — on matched tasks the names agree **99.97%** of the time. However, gaps on the ClickUp side mean only about **53%** of all tracked time maps to a ClickUp task today (**62%** for 2026). Fixing the issues below can raise this toward **~90%**.

MATCHED TODAY	MATCHED IN 2026	ACHIEVABLE
53% of all tracked time	62% current tracking	~90% after fixes 1 & 2

Issues Found (data-verified)

1	ClickUp tasks have a blank Space label. e.g. the "Operations - Bravix" team's tasks exist in ClickUp (folders Wisoman_Sonal, Paragon_Harris, SevenShopper_Lin) but space_name is empty, so they don't map to a Department/Team.	~23,321 h (Bravix alone)	ClickUp admin — assign tasks to the correct Space
2	Time tracked on a project with no task. Recurring work (Training, Emailing, Admin, NB) is logged directly on the project; with no task it can never match a ClickUp task.	21% all-time 31% in 2026	Team process — create standing ClickUp tasks for recurring work
3	ClickUp tasks that were deleted. Hubstaff references a ClickUp task ID, but that task no longer exists in ClickUp (deleted, not merely closed). Mostly 2023–2024 legacy data.	~51,000 h (mostly old)	Hard to recover; avoid deleting tasks going forward
4	Hubstaff projects have no Client linked. All projects show client = (no client); the client name lives only inside the project name, not the proper client field.	All HS projects	Hubstaff admin — link projects to clients
5	Name-based matching for taskless time. Where there is no task, an employee's Department/Team is inferred from their NAME — risky if two people share a first name.	~21% of time	Reduced automatically once issue #2 is fixed
6	Malformed 8-character task IDs. 520 Hubstaff tasks carry an 8-char remote_id (normal is 9); none of them match ClickUp.	520 tasks	Sync/data team — investigate ID format
7	Hubstaff member names are blank. Real names live in activities.user_name; members.name is empty, forcing a fallback to display names.	Data hygiene	Hubstaff sync — populate member names

Recommended Priority

1	Fix blank Space labels in ClickUp (start with Operations - Bravix). Biggest single recoverable block.
2	Create standing tasks for recurring work so Training/Emailing/Admin time attaches to a task instead of the project.
3	Link clients in Hubstaff and keep the ClickUp–Hubstaff integration in sync.

Bottom line: the matching system works; the gaps are ClickUp data-entry issues (blank Spaces) and a tracking habit (no task created). Address those two and accurate matching rises from ~53% toward ~90%.
